GUESTS AND STAFF

- **EPA**: Adam Rayner (AR), Polly Zeeher (PZ)
- **Veolia**: Nick James (NJ), Ashley Kelly (AK), Jessica Keyt (JK), Mark Globan (MG)
- **Earthsure**: Tai Truong (TT)

FACILITATOR

- Susan McNair (SMc)
- Eloise Lane (EL)

APOLOGIES

Thelma Wakelam, Warren Wood

5.35pm WELCOME AND AGENDA

SMc welcomed participants and explained how the meeting would proceed.

PZ introduced herself and explained her role at the EPA (Acting Senior Engagement Lead – Southern Metropolitan Melbourne Region)

SMc noted WW's plans to request a second Council participant to allow for regular Council attendance.

5.35pm GOVERNANCE and PREVIOUS ACTIONS

SMc outlined outstanding actions

Action Update - March #3

EPA to source list of operators managing and treating Cat A waste, and share with CRG.

- EPA provided the CRG with a list of sites licenced to accept Category A waste. See appendix 2

GENERAL UPDATE – Veolia

NJ and TT provided an update on general site operations:

Depackaging facility

NJ provided an update on the depackaging facility:

- There has been an uptick in diversion of organic waste from landfill.
- Installation of a new intake screw and two outtake conveyors, increasing capacity of the facility.
- Capacity to turn 15,000 tonnes of product into compost and recycled packaging every year

Thermal plant

TT provided an update on the thermal plant:

- Business as usual at the site.
- Production is by campaign, meaning that the plant operates when there is a need to operate, and will continue to operate as such
- A university group of civil and environmental engineering students recently toured the site. They were excited to visit and found the processes very interesting.

Landfill

NJ provided an update on landfill operations

- No major upcoming projects.
- The landfill gas (LFG) flare has begun commissioning. Veolia working with their IT department to gain access to live, remote data readings from the flare
- Leachate pond maintenance is progressing as expected.

AK noted recent media coverage of the landfill, and comments made by a State Liberal MP and a City of Greater Dandenong councillor, who was then invited to visit TRRRP to address any concerns.

MG: Veolia provided the guest with context about what occurs on the site, and was able to address their concerns.

TOH: Was there a particular reason that they made comments about TRRRP?

AK: They had received feedback from constituents in Dandenong South. When they visited, they realised that they had conflated TRRRP with other facilities in the offensive odour area. When they had realised their mistake, they were particularly pleased that the site focuses on industry waste. They also showed interest in Earthsure's facilities, and were impressed by the activities ongoing on this site.

There was also some positive coverage of Earthsure published in Sustainability Matters on the 25th of September, which is great to see.

IJ: I was quite disappointed about the coverage, as it was clear from the context that they were not talking about this site. I agree that the cause has been the offensive odour area, not TRRRP. I found it insulting to myself as the only resident living nearby, and to Veolia, the EPA and the City of Greater Dandenong as no one had come to us before the article was posted.

Action update – June #1: Veolia to clarify terms of site if no longer in use as landfill

MG clarified the role of Earthsure when the landfill is full and closes.

- Planning permit currently states, once there is no airspace remaining all other operations need to cease.
- There are many new operations on the site that supports the industry and circular economy goals of the State Government.

Environment
JK gave an update on the sites environmental compliance including EPA notices issued.

Remedial notices are issued to bring duty holders into compliance with the Environmental Compliance Act (2017). There are currently three EPA remedial notices on site:

1. Leachate management
   - Engineered bund has been installed, works have been completed
   - EPA has not yet revoked this notice

2. Landfill gas
   - Minor rectification and assessment works have been completed

3. Dust controls
   - Extensive dust controls are in place across entire site with a ‘continuous improvement’ approach
   - Dust suppressant sprays have been used to reduce dust, works have been completed
   - EPA has revoked this notice

PROJECT UPDATES

Soil washing facility
TT gave an update on the soil washing facility.

- Works ongoing for construction.
- An upgraded wheel wash will be installed, benefitting TRRRP. This wheel wash type will be recommended for the precinct's current wheel wash. There will be two wheel washes once both installed.
- Wheel wash parts expected in mid-October. The wheel wash will be operational before soil washing.
- Thermally treated material (TTM) has received approval to be used as a construction base for the soil washing plant. The material had to be tested for chemical and geotechnical standards, and is as good or even better than garden soil in terms of contamination. Physical properties of the soil must be suitable for use in construction, which has been applied and approved.
- ½ metre of construction aggregate to be laid on top of the subsoil to ensure structural integrity. 40mm of crushed concrete will be laid on top, and set through rolling and wetting. Further crushed concrete will be laid on top and sealed.

TOH: Do you have to seal the top layer? I am under the impression that concrete powder is carcinogenic.

TT: We wet the layer, wet it and roll it to set the concrete through compaction, which fuses the concrete like if it had been poured into a slab, so there will be no future emissions.

IJ: What about water leakage?

TT: We have a rigorous water runoff management plan, using swales, bunding and drains, which will collect and direct the water to the leachate ponds to treat it. The water is assumed to be unclean until it is proven to be clean.

TT invited any further questions.

IJ: Will all trucks and equipment have to use the wheel wash on the way out?

TT: Any truck on the site must go through the main wheel wash on exit.

Thermally treated material
TT gave an update on thermally treated materials:

- Veolia have applied to EPA to recycle thermally treated soil
- The soil would be used as sub-fill such as underneath concrete slabs, as buffer or for leachate drainage material
- Material has been tested and complies with properties needed for use in construction
- If this soil could not be used, the alternative would be to import another material for this use

ENVIRONMENTAL FEEDBACK HOTLINE: **1800 368 737**
EPA ENVIRONMENT LINE: **1300 372 842**

Summary of permission pathways
JK and TT gave an update on applications currently with EPA:

- Application for TTM to be used as buffer sand at TRL – allows TTM to be used as leachate drainage or buffer sand. Approved previously, which had lapsed.
  - Veolia reapplied, and through a process with the EPA, has been re-approved.
- Application for TTM to be used at additional landfills – to be used in similar applications as above at other landfill sites.
  - This has been approved by the EPA
- TTM to be used as construction base
  - Approved by EPA
- TTM to be used as a construction material at other sites – similar applications as at TRRRP, to be presented to the EPA at some time in the future. Want to do this to reintroduce the product back into the economy.
  - Approval TBC, pending submission
- Temporary storage facility – to allow Earthsure to support spikes in soil storage demands for the purpose of treatment, including infrastructure projects like Victoria's Big Build, application filed in December 2023.
  - Approval from EPA pending.

SMc referred CRG members to the March meeting minutes for further information about the temporary storage facility.

AK invited the EPA to provide an update, who did not have anything to share.

AK sought any further questions from the group of which there were none.

The next TRRRP CRG meeting will be held on the 4th of December as a joint meeting with the HRL CRG.

TT raised the possibility of a tour of the soil washing facility, as the site should be nearing completion by December.

6:00pm MEETING CLOSE.

Action tracker:

Item	Action	Who	Date
Action March #1	Veolia to share the outcome of the Development Licence Exemption application to the CRG when received.	Veolia	When outcome is received
Action March #2	EPA to share resources regarding truck requirements with Veolia.	EPA	Next CRG meeting

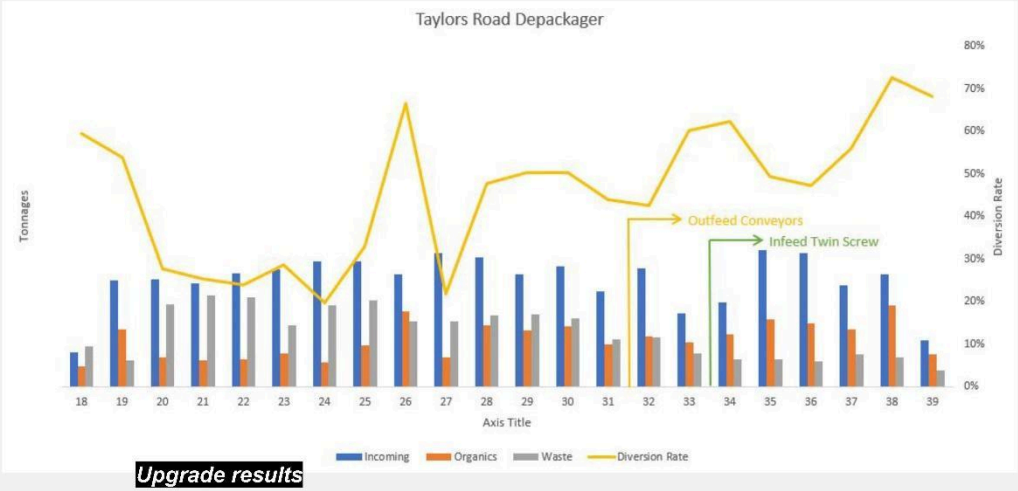
GENERAL UPDATES

DEPACKAGING

Overview:

- Capacity to turn 15,000 tonnes of product into compost and recycled packaging every year
- Recently underwent a further upgrade which has seen greater recovery of organics
- Organics recovered are sent for further processing - composting or anaerobic digestion

Depackaging facility



Upgrade results

GENERAL UPDATES

EARTHSURE THERMAL

Overview:

- **BAU**
- **Campaign mode**

Site interest:

- University tour - Engineering

Action:

- Veolia to clarify terms of site if no longer in use as landfill.
  - Planning permit currently states, once there is no airspace remaining all other operations need to cease
  - EarthSure operations supports the industry and circular economy goals of the State Government.

Facility tour

GENERAL UPDATES

LANDFILL

Overview:

- Slow disposal activity
- LFG flare upgrade
- Leachate pond maintenance to be undertaken

Site coverage:

Dandenong Star Journal

Toxic landfill put on EPA notice

A toxic waste landfill at Taylors Road Dandenong South has been issued three improvement notices by the state's pollution watchdog.

- Completed improvement notice actions

Cranbourne Star News

Timeline unclear for Taylors Road toxic-waste dump

by Cam Lucadou-Wells. An end-point is still yet to be set for the controversial hazardous-waste landfill in Taylors Road Lyndhurst – already...

- Have engaged with the Liberal Member directly and clarified why the timeline extends past 2020

GENERAL UPDATES

ENVIRONMENT

Notice	Description	Action	Status
IMPN-00006639	Proactive 12C leachate management	Bund install around 12C	**Works completed.** **EPA has not revoked the notice.**
IMPN-00006892	Management of landfill gas at leachate sumps/ surface emissions	To mitigate the concentrations, in addition to the cells existing gas infrastructure the sumps will also be connected to the flare. This plan is being assessed by our consultant, auditor and Run Energy.	Requirement 1 (Landfill Gas Performance Assessment and action plan) completed. Landfill Gas Management Plan **Minor rectification and assessment works have been completed.**
IMPN-00006902	Stockpile/ haul road dust controls	Monitoring and trial of suitable sealing agent as an additional control	**Works completed.** **EPA has revoked the notice.**

Pooled leachate within Cell 12C managed

Green hue is the application of spray sealant

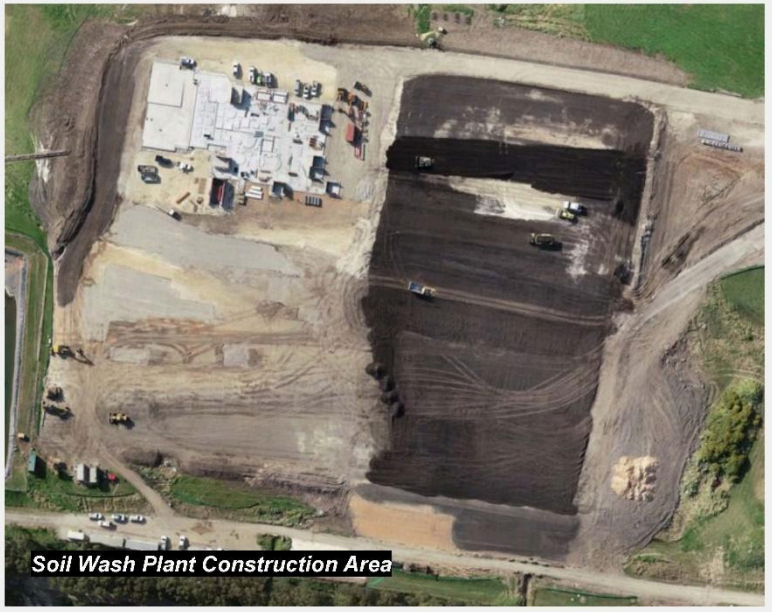
PROJECT UPDATES

EARTHSURE SOIL WASHING

Construction

- Since 11 June works continue
- As a part of the project scope we have included an upgraded wheel wash benefitting TRRRP.
- Wheelwash long lead items shipped expected Mid October 2024
- Wheelwash will be in operation prior to soil washing
- TTM approved for subsoil use. TTM meets clean fill criteria.

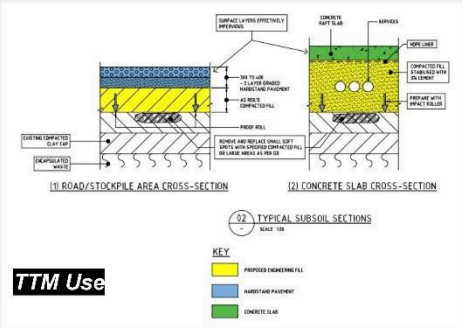


Soil Wash Plant Construction Area

EarthSure Wheel Wash

Wheel Wash Drag Chain

Wheel Wash High Pressure Pump



TTM Use

PERMISSION PATHWAY
SUMMARY

Application	Detail	Submitted	Status
Reapplication to use TTM as buffer sand at Taylors Road.	This documentation allows TTM to be applied with approval. With no approval TTM could not be used as it is considered a waste product.	Sept, 2023	Approved
Application for TTM to be used at additional landfills	This documentation allows TTM to be applied with approval. With no approval TTM could not be used as it is considered a waste product.		Approved
Application for TTM to be used as construction base at TRL	*Will be explained further in the SWP slide		Approved
Application for TTM to be used as construction base at other sites		TBC	TBC
Temporary Storage Facility	The temporary storage facility would allow EarthSure to support spikes in project demands. The facility would be capable of storing up to 40,000 tonnes of low odour, non PFAS impacted Category C soil.	Nov, 2023	Pending approval
Leachate Pond Maintenance	Maintenance work for the upkeep of the existing leachate ponds located at the south-east of the site. This work will support the longevity of the leachate ponds used to treat stormwater that has come into contact with waste.	Dec, 2023	Approved

ENVIRONMENT PROTECTION AUTHORITY

UPDATE

Action item:

- List of Cat A facilities - to be circulated.

VEOLIA
OTHER BUSINESS

Appendix 2 – EPA clarification on Category A approved facilities

From: Adam Rayner
Sent: Monday, September 23, 2024 10:01 AM
To: Susan McNair

OFFICIAL
Hi Susan,
Please see below a list of facilities in Victoria that hold an operating licence and that can possibly receive Category A waste. There are obviously no landfills on this list.
This is all the information that EPA can provide in response to Action #3 below. An FOI request will need to be submitted if any further information is required, and it is definitely not the norm for EPA to even provide this much information.

Thank you
